

Biotech Material Intern

Biotech Materials is a Zagreb-based start-up company that engineers plant-based leather made by recycling grain waste from alcohol production. The material is repurposed for the textile industry, with the goal of contributing to sustainability and solving the problems of pollution and environmental impact in the textile and distillation industry. We are a small but dynamic team looking for reinforcement to support the development of the material before and during its launch.

What you'll do:

- research existing patents and academic articles regarding innovative materials
- communicate with 3rd party r&d facilities, in Croatia and abroad
- acquire and organize collected data
- contribute with ideas and problem-solving on existing and future projects
- set up meetings and communication channels for your field
- budgeting projects and timelines for individual material launches

Requirements:

- 20 hours per week
- excellence in English speaking, reading and writing
- basic Microsoft Office knowledge

What we offer:

- paid 3-month internship with an option for permanent employment
- mentorship and learning opportunities in a dynamic startup environment
- the opportunity to contribute to the invention and patenting of innovative materials
- remote or hybrid employment

If you find this interesting and you are looking for your next challenge, this is the perfect company for you.

You just need to apply at tamara@biotechmaterials.eu with a few sentences about why would you be the perfect with for our team and a CV

Applications last until April 10th.
