**Dajana Milovac** is a postdoctoral student at the Faculty of Chemical Engineering and Technology, University of Zagreb (FCET). After obtaining her M. Sc. degree in Chemical Engineering from the same Faculty in 2008, among the top 10% of students of her class, she joined the Department of Inorganic Materials and Technology, FCET, as a doctoral student, participating in teaching activities through seminars and laboratory exercises.

She was involved in the research project “Bioceramic, Polymeric and Composite Nanostructured Materials” and gained her Ph.D. in 2014 on the subject “Synthesis and characterization of composite materials based on hydroxyapatite and biodegradable polymers”. Her research interest includes the development and characterization of new composite materials for bone tissue engineering applications. During 2012, she stayed at the Centre for Biomaterials and Tissue Engineering in Valencia (Spain) and gained the experience with cell culturing on the porous 3D materials in *in vitro* conditions.

In 2014 she received the award For Women in Science from the Croatian Commission for UNESCO, at the Croatian Ministry of Culture, and L'Oreal Adria.
